# Happy Dance User Manual

## Introduction
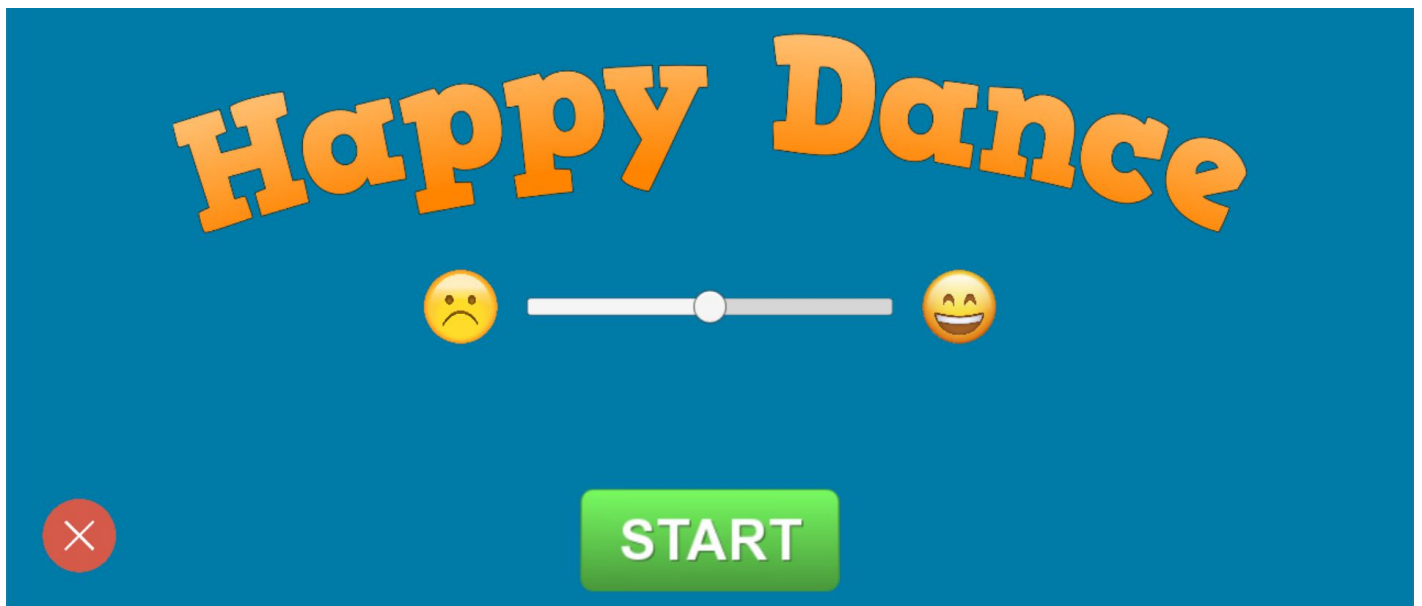

This document will go over how to operate the Happy Dances Program. To Run the program, run the executable file which will bring up a screento choose resolution and graphic level. This graphical level will be based on the users computers hardware. Reccomened testing its speed and smoothness before showing kids.

## Menu Screen

The First Screen has 3 interative features.
- A slider to log an initial happiness level for the child.
- A (X) button to close the program, same as the windows (X) button.
- A start Button to move onto the next dance screen

## Dancing Screen

This screen requires no additonal help from the researcher and runs on for its entirity of about 100s before moving to the final screen.

## Export Screen

The final screen is used to log the final information for the child and update csv with it.
- Happiness slidebard to log the last happiness level.
- An age slide bar to log the age of the child
- A sex radio button to indicate the sex of the child.
- New CSV button to be used on the first isntance of running the program, creates a CSV and logs the info.

- Update CSV button is to be used on all other instances. It will update the info into a CSV file and then move back to the first screen to restart the dance.

## Things that can go wrong

- CSV file not updating ? Must not have the csv file open while clicking the update button, will not allow csv to be updated.
- Child left during dance? restart the program or run through the dance and press the back button without updating the CSV.
- Accidently exit out of program? Restart the program, no need to click new csv, old one will be saved.
